This quiz is graded out of 100 points and is worth about 3% of your class grade. You will have **20** minutes for this quiz. ***Closed everything including calculators!*** To receive partial credit, work must be shown.

---

1. Find the minimum ***product-of-sums*** $\Sigma_{(a,b,c,d)}$=(1,4,6,9,11,12,13)+d(0,15) using a K-map. Show your work and clearly circle your answer. **[40]**
   Note: this is Product-of-sums!!!

2. Using a single shift register (given below), a decoder (any size), inverters (as many as needed), and up to four 2-input gates of any type, build a device which takes a single-bit input X and has an output Y go high if the last 3 values have been 001 or the last two values have been 11. On this shift register, on the rising edge Y[0] gets the Shift in value, Y[1] gets the Y[0] valute, etc.
