W8UM SWR / Wattmeter: LP-100A by Telepost, Inc. Owner, Larry Phipps, N8LP, is an UM Alum & W8UM Member.

The LP-100A is designed as an accurate instrument for monitoring station performance. It provides a number of unique features not seen before in a ham radio wattmeter. The most obvious of these is the vector display. This display shows the complex impedance of the load in two ways. The top line of the display shows impedance in polar form… i.e., magnitude and phase of the impedance. The bottom line shows the real and imaginary components of impedance… i.e., R +jX. The parameters are displayed in a range of 0.1 to 999.9 ohms. Phase is displayed in 0.1 degree increments from 0-90 degrees. Features include… • Fast, high contrast GVFD display with bargraphs for power and SWR, along with numerical readouts for both.
