WHAT'S GOING ON

TODAY

10 o'clock—Cercle Francais meeting in Cercle Francais rooms, University hall.

2 o'clock—Classical club meeting in room A, Alumni Memorial hall.

4 o'clock—Russian society meets in Barbour gymnasium.

7 o'clock—Upper Room Bible class meets at 444 South State street.

7:30 o'clock—Kalamazoo Normal club meets at 1342 Volland street.

TOMORROW

11:15 o'clock—Dean E. H. Kraus speaks in Methodist church on "The New Responsibilities of College Men."

3 o'clock—Mixer at Michigan Union.

U-NOTICES

Sophomore tryouts for assistant baseball managers are asked to call Jasper R. Reid, '18, phone 188, any evening from 6 to 8 o'clock.

Tryouts for the Classical club play will be held at 9 o'clock this morning in University Hall.

Mr. Carson's English 2 section in the Engineering college will be held at 7 o'clock on Monday and Wednesday nights in the class rooms in the rear of Hill auditorium, instead of as formerly announced.

Summer Taught to Speak French

Paris, Feb. 15.—Ignorance of French which has been a source of many difficulties for the American soldiers in Paris and other cities, is the subject of attention from a new French society, the Idee Grancaise a l'Etranger, which is organizing a band of volunteer interpreters, guides, and also a comprehensive system of free instructions.

Miniature Cyclone Strikes Custer

Camp Custer, Battle Creek, Feb. 15.—Roofs of several small buildings were carried away, and ventilators were lifted from the tops of many barracks by a miniature cyclone which hit the camp last night.

The wind rocked and carried buildings at the center of the camp in such a manner that the soldiers were temporarily alarmed. Several smoke stacks were shifted from their bearings and two were leveled. The storm was entirely over in less than 10 minutes.

These Are—"CONSERVATION DAYS"
He is a wise man who sits down and considers his requirements a few days hence.
Buy your films during the "BUSINESS DAYS."
Take your Finishing to a RELIABLE COMMERCIAL PHOTOGRAPHER.
If there is any doubt as to who does the BEST FINISHING let me suggest that you ask to see the METHODS and MATERIALS used in the workshops of the various places, and use your own judgment as to the results obtained.
There is JUST ONE PLACE where the "BEFORE THE WAR" CHEMICALS are still being used and will be used for many months to come, and where the same results are obtained, that's at
LYNDON'S, Where the KODAK is the PRINCIPAL DEFENCE.
Open for Business on "BUSINESS DAYS." Drop your films in the Tube while we are closed and receive Treatment the same as usual.

TURKS BECOMING MORE FASTIDIOUS

Ottoman Merchants Are Adopting Occidental Methods of Doing Business

Rotterdam, Feb. 15.—That the Turks are becoming occidentalized in their business methods and that their tastes are growing more fastidious, is shown in the statement made recently by one of the most influential members of the Young Turk committee to the Balkan correspondent of the Nieuwe Rotterdam Courant.

"We will buy no more shoddy goods. Western manufacturers who think they can act on the old-time principle that 'cheap and nasty' is good enough for Turkey will do well to revise their business methods thoroughly," he declared.

New Spirit in Turkey

It will be necessary, the correspondent asserts, for those who want to do business in Turkey to realize a few new facts. One is that a new spirit has come over the Turkish merchant. His proverbially slow eastern methods have given place to quick decisions and rapid action. He has imbibed a taste for making money quickly. In short, he has become a wide awake modern business man. Besides, there has come a remarkable awakening of national pride. The Turk wants to do everything himself now, and he is especially bent on cutting out the Armenians and the Greeks.

New Business Houses

New companies and business houses, all of them purely Turkish, are springing up daily, and the government has seen fit to grant many of them privileges that virtually place the foreigner out of competition.

On the other hand, Djavid Bey, the finance minister, has come back from Berlin with his chauvinistic ideas considerably chastened, the correspondent writes. Djavid has successfully negotiated a loan of £6,500,000 Turkish pounds from the German government, but obtained only 6,500,000 pounds in cash to pay for German purchases, the remaining 50,000,000 being in German treasury bonds.

Increased Attractions

The Ottoman empire, says the correspondent, will offer increased attractions as a field of operations for foreign industry. One who accurately foresaw this, the writer adds, was Ahram Elkus, the last American ambassador to Turkey. Who made every effort to make sure that a share of the coming economic revival of Turkey should benefit America.

Meanwhile, the Turks are very busy pushing their own industries, especially those that are capable of turning out simple articles of everyday use which they are determined to make themselves. Numbers of handicraft and industrial schools have sprung up all over the country, and hundreds of Turkish youths have been sent abroad to pick up experience in the trades and industries which they will ultimately conduct in their own country.

HEALTH CARDS TO BE KEPT BY UNIVERSITY WOMEN

Times Demand Unusual Care Believes Physical Director

Elements of hygienic living, thought to be compatible with university life, are outlined on a card that has been formulated by the department of physical education for women, in cooperation with the Health service. Observation of the rules is not required, but is being included in the athletic honor point system to stimulate voluntary interest in the matter. For living up to the requirements of the card for 28 days, one honor point is given.

The board is divided into several headings, such as sleep, exercises, care of the teeth, and so on, and on the back is a table where the record is to be kept.

All University women are strongly urged to try out the keeping of the record. Someone in each house group has been asked to present the cards to her group with explanations. Cards may also be secured at the office of Miss Alice Evans, physical director.

"We appeal to the women of the University to consider this method of hygienic living as an aid to a desired state of good health, which in these strenuous times is a more valuable asset than ever before," said Miss Evans.

DOCTORS NEEDED BADLY SAYS NOTED PHYSICIAN

DR. FRANK WIELAND OF CHICAGO SPEAKS AT BANQUET OF HOMOEOPS

Sixty-five students and members of the faculty of the Homoeopathic Medical school attended a banquet given last evening at the Union under the auspices of the Alumni association of the school. The occasion of the dinner was a reception for Dr. Frank Wieland, of Chicago, professor of surgery at Hahnemann Medical college and head of the welfare service of the Montgomery Ward company.

Dr. Wieland is known for his work in bettering the conditions of employees of the Chicago firm, and has been highly praised for his efforts in welfare service. He has been instrumental in encouraging progress in this line in various parts of the country, and is considered an authority on industrial medical work. At present his service at the Montgomery-Ward Company treats an average of 375 cases each day among the company's employees.

Physicians' Work Great

"The work of physicians is the biggest on earth today," said Dr. Wieland. "We must work like the knights of King Arthur's Round Table in overpowering evil, which is found in our line to be diseases and ailments that make our world's workers inefficient. We must work here and on the battle fields of France to keep every single individual up to his maximum efficiency. The government has realized this need of physicians and is encouraging every move of the medical men.

Industrial Physicians Needed

"Industrial physicians are especially needed to carry on the great campaign to keep the forces of the nation at work. Our factors need backing, and we must keep our manufacturing plants going to their utmost capacity.

"Departments of industrial medicine should be established at every university, and I am sure that this step will be taken in a short time. Every man that can possibly study medicine should rush to join the ranks of the physicians. We need many, many more to carry on our great task.

Homoeopaths Skilled

"Homoeopaths are especially skilled to this work because their treatments are particularly effective. When a homoeopathic remedy is prescribed correctly, it is more swift and successful. Every young doctor should remember one thing. There can be no success which disregards the other fellow. Be conscientious in everything thing you do, and dedicate your lives and your souls to the work of bettering your fellow-men."

Telegraph Course Has New Section

A new section of the telegraph code course now in progress will be started Monday afternoon in the telegraph and telephone room of the Engineering building. The course is to give training in buzzer work and to open to all University men and those outside as well. Upon graduation after two to three months instruction, the men will be capable of handling a telegraph instrument in the United States signal corps. No credit is given by the University for this course.

At present there are two courses in radio work in progress under the supervision of Mr. Porter N. Evans, the code course and a course in radio communication. The latter, in which 35 men are enrolled, is a purely technical course in electrical communication by wireless and is open to only those who have completed fundamental courses in electrical engineering. It is given at the request of the United States signal corps, the government supplying all laboratory equipment. The work consists of five hours recitation, one hour laboratory, one hour field work and five hours code practice and military drill. All the men are enrolled in the R. O. T. C., but have been detailed by Lieutenant Major for special drill. Eight hours credit is given by the University for this course.

Mexicans to Reconstruct Ruins

Mexico City, Feb. 15.—The ruins of Mitla, which are situated in the Tehuantepec district of the state of Oaxaca and which have attracted much scientific attention, are to be reconstructed by the government. These striking monuments of Pumenta, a civil engineer, who has prepared a report on the cost and means of construction.

AERO LABORATORY WILL OPEN TODAY

Classes will start today in the new aeronautical laboratory which is now being equipped in room 350 of the Engineering building. The equipment will be completed and the work running smoothly within the next two weeks, stated one of the men in charge yesterday.

The new laboratory will be under the direct charge of Prof. H. C. Sadler, head of the aeronautics department, and Prof. E. W. Pankowski.

One of the novel pieces of apparatus which are to be used in connection with the experimental work in aeronautics is the aerodynamic balance. This instrument, of which there are two others in the United States, is the result of the labor of several men for an entire semester. It is placed in front of the wind tunnel of the laboratory and when in this position will measure the lifting force of the various types of wing sections, or even of model air planes. The resistance to the air of struts and other air plane parts can also be determined by the use of this instrument.

The supply of air under forced draft which is used for the tests is obtained from the blowers which operate the ventilating system of the Engineering building.

Ann S. Thetic Is Admirer of Max

(By Ann S. Thetic)

Celebrities are very human and delightful, if one may consider Max Rosen a representative type. He made several brave efforts to button his spats while answering the questions of the enthusiastic and admiring crowd that surrounded him in the dressing room after the concert last night, but he became so interested in talking that his manager had to finish up the spats and put on his crops besides.

"I have been in this country only six weeks," he said. "For so long I have heard German, Swedish, and Norwegian but now I am talking to my own people," and his glowing face and animated mien were indicative of extreme satisfaction.

When asked what he liked to do for recreation he stuck his hands in his pockets and exhibited fists of chocolate. "I eat chocolate," he ravished. "Oh, I eat quantities of chocolate. I love it and I like to sit in a nice easy chair and smoke a cigarette. And when I can do it, I go to shows."

Quite Temperamental

Mr. Rosen says his practice hours depend upon his moods.

He made a point at losing when interviewed that the reporters wanted to see him but seeing no available refuge he faced about and continued his conversation, which was to the effect that Ann Arbor has the most wonderful auditorium he has ever seen. "I have played in Berlin, Munich, and the Norwegian cities, but never have I seen anything like this," he exclaimed. "And the people here have been so fine to me. My concert has been a great pleasure. I am sorry—" But why, is a matter for conjecture for at this point he was literally dragged away to the waiting car, waving a boyishly friendly farewell as he disboyishly friendly farewell as he disappeared.

VERNON CASTLE PROVES HIS MANHOOD TO ENTIRE WORLD

(Continued from Page One)

the latest exponents of Terpsichore go through their gyrations.

Watch Your Step!" written by Irving Berlin, was the next step of the ladder for the Castle team. Soon after this had become a success, the male member of the firm entered the flying section of the British army. He made good, and Broadway did not see him until two years later when he returned, hardened by his flights, and appeared on the stage with his wife in Eugene's "Follies." It was his first dance in a year.

Several months ago he was stationed at Scarbrook Field, as an instructor. His death occurred while he was engaged in training one of the girls' unit of Uncle Sam to fly the war. He showed in his fire that the enemies of dancing are wrong when they say that a dancer can't come back. Vernon Castle did.
