MAKE CHANGES IN RADIO EQUIPMENT

Will Install New Wireless Set in Engineering Building

MESSAGES RECEIVED MONDAY FROM OTHER UNIVERSITIES

Michigan's entry into active participation in the work of the Western Conference Radio News service, the organization of which is still under way, has been delayed greatly by the inability of those in charge of the local station to make necessary changes in the equipment in order that it may be put in operation.

It was first planned to place the new set in the sub-basement below the electrical laboratory in the north end of the engineering building. With the set there, it would have been possible to drop a verticle antenna from the top of the old power house stack, and to run the lead thorugh a ventilator shaft directly to the apparatus. The operator would then have been so situated as to be free from all outside disturbances.

Neat Signal Unit

This idea has been abandoned, however, due to the fact that the local unit of the signal corps wishes to have the University station situated as close to their own as possible. Consequently, the new equipment will probably be installed within a short time in the same location as the old, room 108 engineering building, this being immediately next door to the signal corps experimental sets.

It is the plan at present to stretch a new aerial from the top of the stack to the roof of the south wing of the building, dropping a lead-in from there to the set. The equipment will probably be decidedly altered, a low power spark transmitter and a continuous wave set being used in place of the present 1 to 15 kilowatt open spark installation. A considerable number of licensed first class commerical operators have been secured to handle the set, and it is hoped that it will be possible to begin regular work within a short time.

Make Additional Tests

Additional tests were conducted by the Western Conference Radio News service last Monday night. Under the latest arrangement, a new scheduled is being used, whereby the time necessary for complete transmission should be reduced to a considerable extent. The entire system is now divided into a northern and a southern division, the former comprising the universities of Wisconsin, Minnesota, and Michigan, with Wisconsin acting as central station, and the southern section including Ohio State, Illinois, and Iowa, with the central station at Purdue, "9ZN," at Chicago, handles the news from Chicago and Northwestern universities, while lack of equipment has made it necessary for Indians to give now used, the northern division conducting its work on continuous waves and the southern section operating on spark. By this means, interference between the two is reduced to a minimum, and the two divisions are enabled to work at the same time, thus making it unnecessary for one to hold off transmission and take up time while waiting on the other.

Michigan is at present handling the work under the signal corps call, "W U9."

BURTON ADDRESSES AUDIENCE AT SOO

Speaking before an audience of more than 3,200 last Thursday night at Sault Ste. Marie, Pres. Marion L. Burton delivered an address on educational matters and also spoke of the University of Michigan.

In his talk, President Burton laid great emphasis on the worthwhileness of education. As he put it, "Education is worth while just in proportion as it enables a person to acquire an appreciation of excellence—to realize what is worth while in life." President Burton also stressed the point that we must deal with facts. The time is past according to him that the noise of some demi-god will be sufficient, it is up to us to demand the facts. But, President Burton goes on to say these facts must be tempered with humanness or the foundation of our country will be shaken.

President Burton took the opportunity of acknowledging the debt owed by the University to ex-governor Chase S. Osborn of Sault Ste. Marie. It was pointed out that this aid of Mr. Osborn's was right now making it possible for Professor Hobbs to conduct his researches in the Pacific ocean and for the residence in Ann Arbor of the American poet Robert Frost, whose influence is already being felt.

Hold St. Joseph Dance Friday Night

St. Joseph's auxiliary will hold a Hallowe'en party at 8:30 o'clock Friday night in St. Thomas hall. Fischer's orchestra will furnish music for the evening. Tickets are on sale for fifty cents at Graham's and Tice's.

MAKE CHANGES IN RADIO EQUIPMENT

Will Install New Wireless Set in Engineering Building.

Mich. D. 10/27/21

MESSAGES RECEIVED MONDAY FROM OTHER UNIVERSITIES

Michigan's entry into active participation in the work of the Western Conference Radio News service, the organization of which is still under way, has been delayed greatly by the inability of those in charge of the local station to make necessary changes in the equipment in order that it may be put in operation.

It was first planned to place the new set in the sub-basement below the electrical laboratory in the north end of the engineering building. With the set there, it would have been possible to drop a verticle antenna from the top of the old power house stack, and to run the lead thorugh a ventilator shaft directly to the appartus. The operator would then have been so situated as to be free from all outside disturbances.

Neat Signal Unit

This idea has been abandoned, however, due to the fact that the local unit of the signal corps wishes to have the University station situated as close to their own as possible. Consequently, the new equipment will probably be installed within a short time in the same location as the old, room 103 engineering building, this being immediately next door to the signal corps experimental sets.

It is the plan at present to stretch a new aerial from the top of the stack to the roof of the south wing of the building, dropping a lead-in from there to the set. The equipment will probably be decidedly altered, a low power spark transmitter and a continuous wave set being used in place of the present 1 to 15 kilowatt open spark installation. A considerable number of licensed first class commerical operators have been secured to handle the set, and it is hoped that it will be possible to begin regular work within a short time.

Make Additional Tests

Additional tests were conducted by the Western Conference Radio News service last Monday night. Under the latest arrangement, a new scheduled is being used, whereby the time necessary for complete transmission should be reduced to a considerable extent. The entire system is now divided into a northern and a southern division, the former comprising the universities of Wisconsin, Minnesota, and Michigan, with Wisconsin acting as central station, and the southern section including Ohio State, Illinois, and Iowa, with the central station at Purdue, "9ZN," at Chicago, handles the news from Chicago and Northwestern universities, while lack of equipment has made it necessary for Indiana to give up hope of taking part in the work.

A new scheme of transmission is now used, the northern division conducting its work on continuous waves and the southern section operating on spark. By this means, interference between the two is reduced to a minimum, and the two divisions are enabled to work at the same time, thus making it unnecessary for one to hold off transmission and take up time while waiting on the other.

Michigan is at present handling the work under the signal corps call, "W U9."
