CONCERT FLASHED TO NEARBY TOWNS VIA RADIOPHONE

Mich D. — 1-27-22

Partly as an experiment and partly to give radio stations near Ann Arbor the benefit of the concert of the Detroit Symphony orchestra concert Monday night, the signal corps of the local R. O. T. C. unit sent out the music over a wireless telephone apparatus installed in the R. O. T. C. building on the east side of the campus.

A transmitter was placed in the second balcony of Hill auditorium, and from it land wires were run through the heating tunnels to the radiophone apparatus. Two signal corps power tubes were used for transmitting, and general reports received indicate that the signals reached out as least as far as Detroit.

The wireless telephone has come into general use of late, and the interest with which reports and concerts have been received by both amateur and professional operators guarantees their success and the continuation of a regular sending service throughout the country.

According to messages received by the University station last night thru the Western Conference Radio News service, there are over two hundred receiving stations in the state of Wisconsin which are regularly copying and distributing the daily market and weather reports. These reports are broadcasted every noon by wireless telephone and telegraph by the physics department radio station at the University of Wisconsin, in co-operation with the State Department of Markets, the United States Weather bureau, and the United States Bureau of Markes and Crops.
