MAJESTIC THEATRE INSTALLS SMALL RECEIVING RADIO SET

Beginning yesterday afternoon and lasting for a week a small receiving radio set was installed in the Majestic theater. This will catch numbers not only from Detroit but from Chicago and other large cities as well.

It is being set up by the K. and K. Radio Supply Company and as far as known is the first radio set in the world to be installed in a moving picture house.

There are many small sets in Ann Arbor, and the following places are now giving free public concerts: the K. and K. Radio Supply company on Thompson street, Eberbach and company, Electric shop on Liberty street, Cannon Electric Service Corporation on West Liberty, and the Blaylight Electric company on Washington street.

URGE GOVERNMENT CONTROL OF COMMERCIAL WIRELESS 'PHONES

Recommendation has been made by the three committees of the government radio conference that the government assume control of all commercial wireless transmitting telephone stations, and that the assigning of transmitting time be placed under the control of the Commerce department. No provision is made, however, for government control of the receiving stations.

It was further recommended that the allocation of 20 wave lengths among the various classes of wireless telephone senders take place. Amateur transmitting stations would be given exclusive use of wave lengths from 150 to 200 miles.

The local station, which has a maximum wave length of nearly 300 lengths, would be but slightly effected by the enactment of the committees recommendations.

CLAIRE DUX *and*
BRONISLAW HUBERMAN
IN JOINT RECITAL

BRONISLAW HUBERMAN
Violinist

CLAIRE DUX
Soprano, Chicago Opera Co.

CHORAL UNION CONCERTS
Hill Auditorium
TUESDAY EVENING
MARCH 14 — 8 P. M.

The American debut of Claire Dux with the Chicago Opera Company was, like the first appearance of Bronislaw Huberman, Europe's master violinist, a musical sensation of the season.

Both of these artists record exclusively for Brunswick. Ask your nearest Brunswick dealer to play these, and other records for you.

"Judge for Yourself"—!"

Free At your dealer's this week A 10-Day Tube of Pepsodent. Present the coupon to any store named below. Make this delightful test this week. Watch the quick effects. The benefits will be a revelation to you.

When film-coats make teeth dingy — Pearly teeth which one delights to show — When teeth do not glisten — When film removal makes teeth shine

Teeth People Show

and teeth they don't—the difference lies in a new way to combat film

A new method of cleaning has brought prettier teeth to millions. Also cleaner, safer teeth.

You see the results wherever you look. Teeth now glisten which before were dim. They show in smiles now where folks once concealed them.

This is to tell you the reason, then to urge that you make a free test.

They remove the film

These millions have gained whiter teeth by simply combating film in this new way.

Film is that viscous coat you feel. It clings to teeth, gets between the teeth and stays. The ordinary tooth paste does not effectively combat it. The tooth brush, therefore, has left much of it intact.

Film absorbs stains, making the teeth look dingy. Film is the basis of tartar. That is why teeth become cloudy and discolored. And some teeth—like smokers' teeth—become badly stained.

Film holds food substance which ferments and forms acids. It holds the acids in contact with the teeth to cause decay.

Germs breed by millions in it. They, with tartar, are the chief cause of pyorrhea.

Thus most tooth troubles are now traced to film. Those troubles have been constantly increasing for lack of a proper film combatant.

Now you can fight it

Dental science, after long research, has found two ways to fight film. Many careful tests have proved their efficiency. Authorities now advise them, and leading dentists half the world over are urging their adoption.

A scientific tooth paste has been perfected to comply with modern requirements. These two film combatants are embodied in it. So one may now attack that film twice a day at home.

The name of that tooth paste is Pepsodent.

Other new effects

The saliva contains two great tooth-protecting agents. One is a starch digestant. That is to digest starch deposits on teeth before they ferment and form acids. The other is alkali, to neutralize the acids which cause tooth decay.

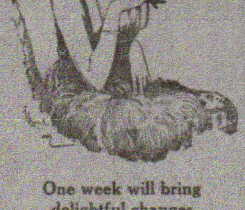

Certain food elements will multiply those tooth-protecting factors. But modern diet often fails to supply those elements regularly. Authority, therefore, denires the tooth paste to apply that stimulation twice a day.

Pepsodent does that. It multiplies both the starch digestant and the alkalis in the saliva. Every application gives these natural tooth-protecting agents many-fold effects.

Means a new dental era

Old-time tooth pastes, based on soap and chalk, depress these factors in saliva. They reduce this tooth-protecting power on which so much depends. And they do not end the film.

So Pepsodent brings a new dental era to people who employ it. It brings five desired effects which old ways do not bring. So millions of people have come to adopt it, largely by dental advice.

One week will bring delightful changes

Pepsodent will quickly prove itself. The changes which you see and feel will very soon convince you.

Present the coupon this week for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coats disappear. Watch how every use leaves the mouth in fresh, alkaline condition.

One week will show you what this method means to you and yours. Go start the test today.
